The AVS Pacific Rim Symposium on Surfaces, Coatings and Interfaces (PacSurf 2018) will be held on the Big Island of Hawaii from December 2 – 6, 2018. This conference is being organized by AVS (United States) with a Steering Committee composed of representatives from Australia, Canada, China, Japan, Korea, Mexico, New Zealand, Philippines, Singapore, Taiwan, and the United States.

PacSurf2018

Colloids and Surfaces B: Biointerfaces is an international journal devoted to fundamental and applied research on colloid and interfacial phenomena in relation to systems of biological origin, having particular relevance to the medical, pharmaceutical, biotechnological, food and cosmetic fields. Submissions that: (1) deal solely with biological phenomena and do not describe the physico ...

Interactions between metals and oxides are key factors to determine the performance of metal/oxide heterojunctions, particularly in nanotechnology, where the miniaturization of devices down to the nanoregime leads to an enormous increase in the density of interfaces.

Interaction of nanostructured metal overlayers with oxide

Many surfaces considered in physics and chemistry (physical sciences in general) are interfaces. For example, a surface may be the idealized limit between two fluids (the surface of the sea) or the idealized boundary of a solid (the surface of a ball). In fluid dynamics, the shape of a surface may be defined by surface tension. However, they are surfaces only at macroscopic scale.

Chapter 9 PE Pipe Joining Procedures 328 The principle of heat fusion is to heat two surfaces to a designated temperature, then fuse them together by application of a sufficient force.

§4. The P and D family of associate. minimal surfaces. Schwarz's P and D surfaces and their associate surface G (the gyroid) are the topologically simplest examples of embedded TPMS that have cubic lattice symmetry. They are related by the continuous bending transformation described in 1853 by Ossian Bonnet. The mean curvature (which is zero at every point), the Gaussian curvature, and the ...

Brushed or dull polished metal is metal with a unidirectional satin finish. It is produced by polishing the metal with a 120-180 grit belt or wheel then softening with an 80-120 grit greaseless compound or a medium non-woven abrasive belt or pad.. Commonly brushed metals include stainless steel, aluminium and nickel. Brushed finishes are popular in both small appliances and whiteware, and ...
